Got a question?

Check out our Frequently Asked Questions (FAQ) for helpful information and quick answers.

What is the difference between TomTom Maps and Orbis Maps?

TomTom Orbis Maps

TomTom's latest generation map platform. It features a modern, cloud-native architecture with richer map data, higher update frequency, and improved support for advanced use cases such as EV routing, real-time traffic, and precise geocoding. New APIs and features are built on Orbis Maps going forward.

TomTom Maps

The previous generation map platform. APIs tagged with TomTom Maps continue to be supported but are based on the prior map format. Some of these products are in the process of being deprecated as equivalent or improved functionality becomes available on the Orbis Maps platform.

If you are starting a new integration, we recommend using APIs tagged with Orbis Maps to benefit from the latest data, performance improvements, and long-term support.

Feedback

How does volume pricing work – do rates change in steps?

Is the free tier really free forever, or does it expire?

Which APIs are available on the free tier, and which require a custom contract?
